COMPLETE EXTRUDED FEED FOR POST-BROODING GLASS EEL AND PRE-FATTENING JUVENILE EEL

Extruded micro granules for the weaning and the pre-fattening of eels starting from the elver phase. Carefully formulated for the best amino acid profile and the best protein biological value, these pellets are particularly desirable right from their first use. The particular physical characteristic of this product makes it possible to add, directly during farming, significant amounts of fish oil (up to 6-8%), with the purpose of ensuring the desired growth curve.
